Common Earthworm Felt Puzzle

A Giant Insect World puzzle
build it · take it apart · build it again

You will need:

- Reddish-brown & pale-orange felt
- Scissors
- This instruction sheet and template
- The brown felt mat for soil habitat (optional)

How to build it

- 1 Trace each shape onto the reddish-brown felt.
- 2 Cut out all 3 pieces carefully.
- 3 Lay the brown mat down — that's your soil!
- 4 Place the front body, pointed head at the top.
- 5 Add the rear body below; curve them into an S.
- 6 Lay the pale saddle over the join. Done!

Did you know?

No eyes, ears or bones — it breathes through its skin.

It eats its way through soil, recycling dead leaves.

Its tunnels let air and water into the ground.

Charles Darwin studied worms for 39 years!

Tiny bristles grip the soil so it can pull itself along.

The pieces

Find these colours in felt or paper

Reddish brown · Pale orange

Using the template, cut out:

Front body ×1 — reddish brown

Rear body ×1 — reddish brown

Saddle ×1 — pale orange

That's 3 shapes in total!

The simplest kit in the set — a great first puzzle.

Finished!

Your earthworm is about 12 × 4 cm.

Take it apart and build it again!

Wiggle it into any shape you like — worms are bendy!

Collect the set:

Underground: woodlouse, earthworm, ant
