Common Shiny Woodlouse Felt Puzzle

A Giant Insect World puzzle
build it · take it apart · build it again

You will need:

- Grey & dark-grey felt or paper
- Scissors
- This instruction sheet and template
- The brown felt mat for soil habitat (optional)

How to build it

- 1 Trace each shape onto the right felt colour.
- 2 Cut out all 10 pieces carefully.
- 3 Lay the brown mat down — that's your soil!
- 4 Place the grey body, then add the head at the front.
- 5 Tuck 6 legs under and add 2 antennae.
- 6 The lines show its armour segments. Done!

Did you know?

It's a crustacean — more closely related to crabs!

It breathes through gills and needs damp places.

It recycles rotting leaves, helping make new soil.

Also called a roly-poly, cheeselog or pill bug.

When scared it can roll up into a tiny ball.

The pieces

Find these colours in felt or paper

Grey · Dark grey

Using the template, cut out:

Body ×1 — grey (segmented oval)

Head ×1 — grey

Legs ×6 — dark grey

Antennae ×2 — grey

That's 10 shapes in total!

Finished!

Your woodlouse is about 5 × 3 cm.

Take it apart and build it again!

Real woodlice can roll into a ball!

Collect the set:

Underground: woodlouse, earthworm, ant
